SUMMARY

Data engineer with experience building research data platforms and art-market analytics pipelines. Led platform delivery from stakeholder interviews and requirements definition through implementation and operations. Hands-on experience in Python, SQL, data integration, distributed processing, data quality, and governance.

CORE SKILLS

Programming: Python, SQL
Data: Data engineering, ETL, integration, modeling, warehousing, quality, governance
Analytics & AI: Data analysis, machine learning, LangChain | **Cloud:** AWS

PROFESSIONAL EXPERIENCE

HUINNO
Dec 2025 – Present

Data Engineer

- Built a shared data platform for medical research. Interviewed researchers, defined requirements for automated workflows and reproducibility, and designed the architecture and technology stack.
- Built Airflow/dbt pipelines and an Iceberg lakehouse, with PostgreSQL/DuckDB SQL access, replacing scattered scripts and file transfers with shared data workflows.
- Combined Iceberg dataset versions with DataHub lineage. Created tools to pin and restore specific dataset versions, and implemented source-data recovery and integrity checks.
- Built and operated a 10-node Kubernetes cluster using company hardware and Pulumi. Separated execution environments and integrated identity and access controls.
- Deployed MLflow experiment tracking and a model registry. Research-code integration and end-to-end reproducibility validation remain in progress.

Cellkey
Jul 2025 – Dec 2025

Data Engineer

- Designed a data-cleaning pipeline with Apache Airflow 3.x and deployed it locally.
- Maintained and tuned data workflows using AWS Lambda, Batch, and Step Functions.

Netmelon
Mar 2025 – Jun 2025

Backend Engineer (Freelance)

- Implemented backend APIs for Android and iOS in-app purchases, including subscription renewals and cancellations.
- Containerized a Flask service with Docker and deployed it on Google Cloud Run; operated Firestore and Cloud Storage and implemented resource-ownership checks.
- Added unit tests for APIs backed by large language models and refactored legacy code.

PROFESSIONAL EXPERIENCE (CONTINUED)

Eazel Inc. Jan 2019 – Sep 2024

Team Lead, AI Labs Jun 2022 – Sep 2024

- Led the design, implementation, and operation of data pipelines integrating artist, artwork, auction, and institution data for art-market analytics.
- Built distributed transformation and loading pipelines with AWS EMR and PySpark, orchestrated through Airflow.
- Centralized scheduling, monitoring, and remote control for 50+ collection instances with Flask and WebSockets, enabling operators to identify failures and restart instances remotely.
- Moved image and text duplicate detection into PostgreSQL with pgvector, reducing data transfers and type conversions and cutting index build time by 50%.
- Designed approximately 50 warehouse tables and canonical records to manage duplicate data consistently across sources. Defined separate source, warehouse, and data-mart layers.
- Built analytics dashboards and a LangChain chatbot prototype with PostgreSQL and Neo4j query tools. Managed AWS infrastructure and GitHub Actions CI/CD.

MLOps Engineer Oct 2021 – Jun 2022

- Performed data analysis, natural language processing (NLP) modeling, and validation using Hugging Face; integrated DVC into machine learning workflows.
- Built and operated Instagram data collectors and managed PostgreSQL data.
- Built a social-network analysis dashboard with Flask, Next.js, and Cytoscape.js. Its findings supported Series A fundraising.

iOS Developer Jan 2019 – Oct 2021

- Led API-client design and backend integration with a focus on application performance and scalability.
- Introduced GitHub Actions CI/CD and a reactive architecture using ReactorKit to improve application responsiveness and maintainability.

Finple Inc. Jan 2018 – Nov 2018

Software Engineer, DevOps

- Maintained hybrid iOS and Android applications and developed a Node.js data scraper.

EDUCATION

Korea Polytechnic University Graduated Feb 2018
B.S., Computer Engineering

CERTIFICATION & LANGUAGES

Certification: Engineer Information Processing, HRD Korea Nov 2017
Languages: Korean (native); English (OPIc Advanced Low)
